GLANNA STUD HISTORY

The Glanna Flock was commenced in 1934 by the late Jack Rayner with Mudgee fine wool ewes and rams of Dalkeith blood. From 1943 to 1984 rams from Bocoble were used. In 1984 97 ewes from the Glanna flock were passed by official inspection for the registration of the stud and in 1985 a further 205 ewes were also passed.

In 1985 and 1986 69 stud ewes were purchased from the Merryville Stud. Since 1984 twenty one Merryville rams have been added to the stud ranging from superfine to medium wool including 1 show ram in 1985 purchased for \$8,500 (Supreme Monarch), 1 in 1987 for \$10,000 (Melbourne Monarch) and the highest priced ram sold at auction at Goulburn Ram Sale in 1989 for \$34,000 (this being a Merryville ram from the Brilliant Monarch family). In 2000 a Merryville Stud Ram was purchased at Mudgee Ram Sale for \$20,000, being a extra-superfine wool ram known at Glanna as "Director". Numerous other Merryville rams have been purchased since then with the latest being a Fine-Medium ram at the Mudgee Ram Sale in February 2021.

Our Fine-Medium wool family has been bred, originally using 2 Merryville Murgha Rams, Bocoble rams, a Koonwarra Ram and Glanna Fine wool family rams.

Glanna Horned Stud has 426 stud ewes and in 2021, 92% of these were mated to Glanna bred Stud rams.

Our Poll Merino Stud was founded on Glanna, Merryville Poll, Roxanna, and Kurretta Poll bloodlines. Glanna purchased 72 Poll Special Stud ewes to \$610 a head at the dispersal of the Roseville Park Poll Stud at Dubbo in 1989.

Our Poll Stud ewes now total 291 mated in 2021, and all of our current Poll Stud Sires are 2nd, 3rd and 4th generation Glanna bred. Glanna purchased a Quamby Park Poll Stud Ram at the Goulburn Ram Sale in January 2002, for \$5,500 this ram being a Fine Wool sire. In 2008 a Merryville Poll Stud Ram was purchased for \$5250 at Armidale Ram Sale. In 2014 Glanna used semen from Willandra Desmond (WD) in our Poll Stud and also in 2016 at Hamilton Sheepvention Glanna purchased a Poll Sire from Glendonald Stud Victoria for \$4400 (GD).

From 1992 to 1997 Dr. Jim Watts, M.V.Sc. Ph.D. was engaged as technical advisor to Glanna.

Also in July 1993 Owen O'Keefe was engaged as representative to the Glanna Stud operation, with Owen retiring in June 2003.

In July 2002, Dennis Ekstedt was engaged as Glanna's Victorian Representative for both Glanna Merino Stud and Glanna Merino Services.

The Glanna stud has over the last 25 years continued to offer sheep and wool classing advice, with this now becoming a bigger part of the business with Ron and Jeff providing classing and consultancy advice for many clients throughout NSW and Victoria.

The Glanna Stud is owned by Ron Rayner, wife Dianne, and son Jeff trading as Glanna Merino Stud.

FINE MEDIUM FAMILY (64-66's Count)

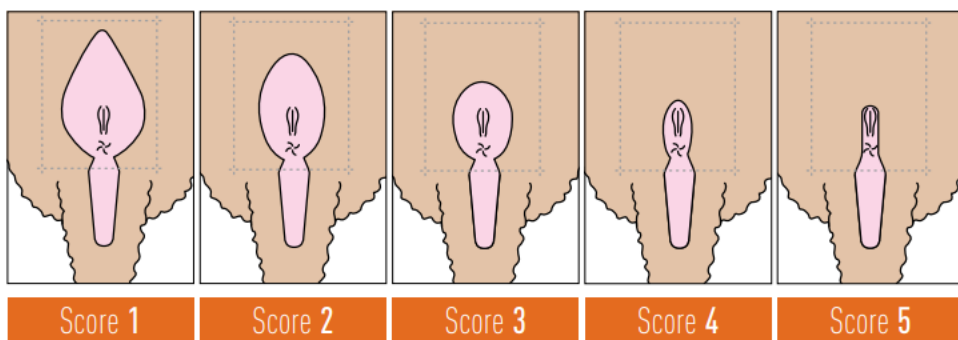

POLL STUD (74-64's Count)

BARE BREECH SCORING

Bare breech scoring (or Breech Cover as it is known in ASBV's) has been taking place at Glanna since 2006 with interestingly steady improvements with the amount of bare area under the tail. The figure below shows a small amount of bare area and with even this small amount it eases the chances of dags forming. They are scored at 8 months of age (Post Weaning PW) now using the Merino Select (BCOV) scoring system with added, extended notes of our own to give us a more detailed description.

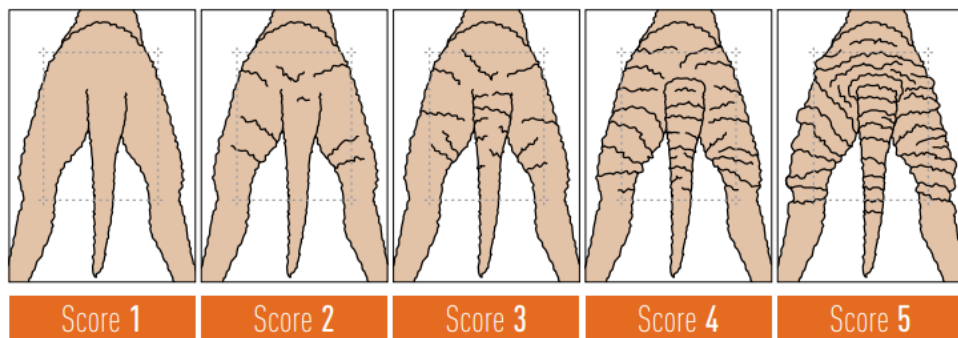

Breech Cover Scores (Merino Select)

* Courtesy of Visual Sheep Scores Version 3 2019 Sheep Genetics Merino Select

BREECH WRINKLE SCORING

Breech wrinkle is also scored at 8 Months of age (Post Weaning), again now using the Merino Select (BWR) scoring system with our own notes added (In particular the looseness of the skin around the tail).

* Courtesy of Visual Sheep Scores Version 3 2019 Sheep Genetics Merino Select

ASBV'S EXPLAINED

Understanding MERINOSELECT ASBVs

- An ASBV of 0 is the average of the 1990 drop. It is important to compare ASBVs against current industry average.
- Note: A useful rule of thumb for converting ram ASBVs into lamb production differences is to simply halve the ASBV (as rams contribute half the genetics of the lamb).
- Accuracy - published as a percentage, is a reflection of the amount of effective information that is available to calculate the ASBV. All ASBVs are now published with accuracies. The higher the percentage, the closer the ASBV is to the true breeding value of the animal. Breeding values without accuracies are Flock Breeding Values (FBVs) and can only be compared within the flock.
- MLA acknowledges the contributions of the Australian Government and AWI in the development of this publication.

TEST TERMS AND EXPLANATIONS

In this Catalogue

DOB	Date of Birth (Taken In Two Week Blocks)
P / H	Poll or Horn Ram
MIC	Current Micron Fibre Test
SD	Current Standard Deviation Fibre Test
CV	Current Coefficient Variation Fibre Test
CF	Current Comfort Factor Fibre Test
CURV	Current Curvature Fibre Test
YIELD	Current Wool Yield %
PWWT	Actual Post Weaning Body Weight at 9 Months of Age
AYWT	Actual Yearling Body Weight at 12 Months of Age
ABWT	Adult Body Weight at 24 Months Age
BCOV	Bare Breech Score (Merino Select) Scored 1-5 with 1 Being a Large Bare Area and 5 No Bare Area
EBWR	Early Breech Wrinkle Score (Merino Select) Scored 1-5 with 1 Being Plain Breeched and 5 Being a Very Developed Breech.
YWT	ASBV Yearling weight (YWT) describes the genetic difference in liveweight measured at yearling age. YWT is expressed in kilograms (kg)
YFD	ASBV Yearling fibre diameter (YFD) describes the genetic difference between animals for fibre diameter measured at yearling age. YFD is expressed in microns.
YCFW	ASBV Yearling clean fleece weight (YCFW) describes the genetic difference as a percentage between animals for clean fleece weight measured at yearling age. YCFW is expressed as a percentage (%)
FP+	ASBV FP+ estimates the genetic difference between animals against a production system that focuses on genetic improvement of fleece weight, fibre diameter, staple strength, worm resistance and reproduction.
MP+	ASBV MP+ estimates the genetic difference between animals against a production system that focuses on genetic improvement in fleece weight, fibre diameter, body weight, staple strength and reproduction.
DP+	ASBV DP+ estimates the genetic difference between animals against a production system that focuses on genetic improvement in body weight, fleece weight, staple strength, carcase trait and reproduction.

Added to Pen Cards

SKIN	Skin Class Type Eg: Wool, Frame, Wool-Frame, Frame-Wool and any with an added "+" for Developed or "-" for Plainer
