GLANNA STUD HISTORY

The Glanna Flock was commenced in 1934 by the late Jack Rayner with Mudgee fine wool ewes and rams of Dalkeith blood. From 1943 to 1984 rams from Bocoble were used. In 1984 97 ewes from the Glanna flock were passed by official inspection for the registration of the stud and in 1985 a further 205 ewes were also passed.

In 1985 and 1986 69 ewes were purchased from the Merryville Stud. Since 1984 eighteen Merryville rams have been added to the stud ranging from superfine to medium wool including 1 show ram in 1985 purchased for \$8,500 (Supreme Monarch), 1 in 1987 for \$10,000 (Melbourne Monarch) and the highest priced ram sold at auction at Goulburn Ram Sale in 1989 for \$34,000 (this being a Merryville ram from the Brilliant Monarch family). In 2000 Merryville Stud Ram was purchased at Mudgee Ram Sale for \$20,000, being an extra-superfine wool ram known at Glanna as "Director" and a Quamby Park Poll Ram was purchased at Goulburn Ram Sale in January 2002, for \$5,500, being a fine wool ram.

Our Fine-Medium wool family has been bred, originally using 2 Merryville Murgha Rams, Bocoble rams, a Koonwarra Ram and Glanna Fine wool family rams.

Glanna Stud has 517 registered stud ewes and in 2019, 100% of these were mated to Glanna bred Stud rams. Our Poll Merino Stud was founded on Glanna, Merryville Poll, Roxanna, and Kurretta Poll bloodlines. Glanna purchased 72 Poll Special Stud ewes to \$610 a head at the dispersal of the Roseville Park Poll Stud at Dubbo in 1989.

Our Poll Stud ewes now total 260 mated in 2020, and our Glanna Poll Stud Sires are 2nd, 3rd and 4th generation Glanna bred. Glanna purchased a Quamby Park Poll Stud Ram at the Goulburn Ram Sale in January 2002, for \$5,500 this ram being a Fine Wool sire. In 2008 a Merryville Poll Stud Ram was purchased for \$5250 at Armidale Ram Sale. In 2014 Glanna used semen from Willandra Desmond in our Poll Stud and also in 2016 at Hamilton Sheepvention Glanna purchased a Poll Sire from Glendonald Stud Victoria for \$4400.

From 1992 to 1997 Dr. Jim Watts, M.V.Sc. Ph.D. was engaged as technical advisor to Glanna.

Also in July 1993 Owen O'Keefe was engaged as representative to the Glanna Stud operation, with Owen retiring in June 2003.

In July 2002, Dennis Ekstedt was engaged as Glanna's Victorian Representative for both Glanna Merino Stud and Glanna Merino Services.

The Glanna stud has over the last 24 years continued to offer sheep and wool classing advice, with this now becoming a bigger part of the business with Ron and Jeff providing classing and consultancy advice for many clients throughout NSW and Victoria.

The Glanna Stud is owned by Ron Rayner, wife Dianne, son Jeff trading as Glanna Merino Stud of Cope Rd. Gulgong NSW 2852.

BARE BREECH SCORING EXPLANATIONS

Five years ago we started observing the bare breech area's on our young sheep at mulesing time (we mules at 8-9 months of age not as lambs). We found considerable differences between individual sheep and different shapes of bare area when comparing rams to ewes. This led to us developing OUR OWN SCORING SYSTEM not the so called industry standard system which discounts the differences between the males and females.

1. The industry experts are promoting strongly that if the sheep has neck development it will have a wrinkly body and tail, and if the sheep has a plain neck it will have a plain body and tail. Our observations in the Glanna-Merryville type show THERE IS NO CORRELATION between a wrinkly neck and wrinkly tails and vice versa.
2. There is also no correlation between a developed sheep having less bare breech area and a plainer sheep having more, in fact our scoring system indicates our developed, heavier cutting sheep are coming up with at least as much bare breech area than our plainer sheep.
3. We believe that the scoring of lambs at lamb marking for tail wrinkle and bare breech is very misleading as a lamb with loose wrinkle on the tail at lamb marking, if not mulesed will by 8-9 months of age have got quite a plain breech. There seems to be very little correlation between skin development of a lamb at lamb marking time to a young hogget age which is the time you get a good indication of what the animal will look like in its adult life.
4. We believe than now with our scoring system, and linked to our pedigree system We can give clients meaningful advice that can lead to some modification to the breech area of Glanna blood sheep. Our own stud sheep have certainly modified considerably. It is obvious that a lot of the best young ewes have some bare breech area compared to many fine wool sheep.
5. We will not be introducing outside blood from 'so called' bare breech rams, many of which come from mixed genetics, which would destroy the prepotency of the Glanna Stud to produce productive, good woolled sheep with high dressing weights.
